

session:-1

1.name 5 IT job roles and write one line about what each role does.

ans:-

IT Job Roles and Their Functions:

- Developer: Writes and maintains code to build software applications, websites, and systems.
- Tester (QA): Evaluates software applications to identify bugs, flaws, and performance issues before deployment.
- UI/UX Designer: Designs user interfaces and crafts optimal user experiences for applications and websites.
- Data Analyst: Processes and interprets data to help organizations make informed business decisions.
- AI Engineer: Builds and trains machine learning models to enable automated and intelligent software capabilities.

2.List 3 product companies and 3 service companies with one example of work each does.

ans:-

Product Companies vs. Service Companies

Product Companies:

- Google: Builds and sells access to software products like Google Search, Android, and Google Workspace.
- Zoho: Develops a suite of cloud-based business and CRM tools for business management.
- Microsoft: Creates and licenses operating systems (Windows), productivity suites (Office), and cloud hardware/software.

Service Companies:

- TCS (Tata Consultancy Services): Provides custom software development, IT consulting, and outsourcing services to global enterprise clients.
- Infosys: Offers business consulting, IT strategy, and custom technical implementations for corporate clients.
- Wipro: Manages IT infrastructure, software operations, and custom integration projects for third-party businesses.

3. Write the full forms and one-line use of: GitHub, Slack, Jira, IDE, API.

ans:-

Full Forms and Uses:

- GitHub: Host platform for Git repositories; used for version control, code hosting, and team collaboration.
- Slack: Searchable Log of All Conversation and Knowledge; used for real-time team messaging, communication, and workplace collaboration.
- Jira: Derived from Gojira (Japanese name for Godzilla); used for project management, issue tracking, and managing Agile development workflows.
- IDE: Integrated Development Environment; used as a software application interface providing tools (editor, debugger, compiler) for writing code efficiently.
- API: Application Programming Interface; used to allow different software systems and applications to communicate and share data with each other.

4. Name any 5 programming languages and mention one popular use case for each.

ans:-

Programming Languages and Popular Use Cases:

- Python: Widely used in Data Science, Artificial Intelligence, and backend web development (Django/Flask).
- JavaScript: Primary language used for dynamic web development and interactive browser interfaces.
- Java: Commonly used for enterprise backend systems and native Android app development.
- C++: Used in high-performance computing, game development engines, and system software.
- SQL: Used for querying, manipulating, and managing relational databases.

5. What is the difference between a developer and a tester? Answer in 2 lines.

ans:-

Difference Between a Developer and a Tester

A developer builds and writes code to create functional software features from scratch based on project requirements.

A tester evaluates and breaks down that code to find bugs, ensure quality, and verify that the software runs without errors.
