

Session:-2

1. What are the three main layers of software architecture? Write one line about each.

ans:-

- Presentation Layer (UI): The user interface where users interact with the application visually.
- Business Logic Layer (Backend): The core processing unit that evaluates rules, calculations, and data workflows.
- Database Layer: The storage layer responsible for securely saving, retrieving, and managing application data.

2. Define client and server in your own words with one real-life example.

ans:-

- Client: A device or application (like a web browser or mobile app) that requests information or services.
- Server: A centralized computer or system that processes requests, retrieves data, and sends back responses.
- Real-life Example: Ordering food at a restaurant—you (the client) place an order with the waiter, and the kitchen (the server) processes the request and serves your meal back to you.

3. Write 2 differences each between desktop apps, web apps, and mobile apps.

ans:-

- Desktop Apps:

- 1.Installed directly on a PC or laptop operating system (Windows/macOS).
- 2.Can function entirely offline without an active internet connection.

- Web Apps:

- 1.Accessed through a web browser without needing local installation.
- 2.Requires an active internet connection to load and process data.

Mobile Apps:

- 1.Designed specifically for mobile operating systems (iOS/Android) and installed via app stores.

2. Built to utilize built-in smartphone features such as GPS, camera, and push notifications.

4. Name any 3 databases and mention whether each is SQL or NoSQL.

ans:-

- PostgreSQL: Relational Database (SQL)
- MongoDB: Document-oriented Database (NoSQL)
- MySQL: Relational Database (SQL)
