

session:-5

1. Write the Git command for each: initialize a repo, stage all files, commit with a message, push to remote, pull latest changes.

ans:-

- Git Commands
- Initialize a repo: `git init`
- Stage all files: `git add .`
- Commit with a message: `git commit -m "Your commit message"`
- Push to remote: `git push origin main`
- Pull latest changes: `git pull`

2. What is the difference between git fetch and git pull? Answer in 2 lines.

ans:-

- `git fetch` downloads the latest commits, files, and refs from a remote repository without integrating them into your working code.
- `git pull` fetches the remote changes and immediately merges them into your current working branch.

3. Create a new GitHub repository, push any small text file from your local system, and share the repo link.

ans:-

- Log in to GitHub and click New Repository.
- Name your repository (e.g., my-first-repo), keep it Public, and click Create repository.
- Create a text file (sample.txt) locally and run:

Bash

- `git init`
- `git add sample.txt`
- `git commit -m "Initial commit"`
- `git branch -M main`
- `git remote add origin https://github.com/your-username/my-first-repo.git`
- `git push -u origin main`
- Shareable URL Example: `[https://github.com/your-username/my-first-repo](https://github.com/your-username/my-first-repo)`

4.What is the difference between a Fork and a Pull Request? Answer in 2 lines.

ans:-

- Difference Between a Fork and a Pull Request
- A Fork is a personal copy of another user's repository stored under your own GitHub account. A Pull Request is a submission asking the original repository maintainer to review and merge your changes into their project.

5.Create a new branch named feature-test, make one commit on it, and merge it back to the main branch. Write the commands you used

ans:-

Bash

1. Create and switch to the new branch

git checkout -b feature-test

2. Stage changes and make a commit on feature-test

git add .

git commit -m "Add feature test work"

3. Switch back to the main branch

git checkout main

4. Merge feature-test into main

git merge feature-test
