**1. Create 'enquiry.html' in your 'tuition-class-site' folder with the same boilerplate as 'index.html' and a form using `method="get"` with four fields: student name (text), parent email (email), parent phone (tel) and age (number), each with a label connected by for and id. Hint: If you missed Session 2, first make 'index.html' with only the boilerplate and one h1. Constraint: Clicking each label must move the cursor into its field.**

**1. enquiry.html code**

```
<!DOCTYPE html>
<html>
<head>
  <meta charset="UTF-8">
  <title>Enquiry - Bright Future Tuition Classes</title>
</head>
<body>

  <h1>Student Enquiry Form</h1>

  <form method="get" action="">

    <p>
      <label for="student-name">Student Name:</label>
      <input type="text" id="student-name" name="student-name">
    </p>

    <p>
      <label for="parent-email">Parent Email:</label>
      <input type="email" id="parent-email" name="parent-email">
```

```
    </p>

    <p>
      <label for="parent-phone">Parent Phone:</label>
      <input type="tel" id="parent-phone" name="parent-phone">
    </p>

    <p>
      <label for="student-age">Age:</label>
      <input type="number" id="student-age" name="student-age">
    </p>

    <button type="submit">Submit Enquiry</button>

  </form>

</body>
</html>
```

**2. Understanding the four fields**

| Field | Input type |
|---|---|
| Student Name | text |
| Parent Email | email |
| Parent Phone | tel |
| Age | number |

Important concept:

For example:

```
<label for="student-name">Student Name:</label>
```

<input type="text" id="student-name">

The for value and id value are the same. Therefore, clicking the label moves the cursor into the input field.

**3. Updated project folder**

tuition-class-site/

index.html

enquiry.html

New

class_photo.jpg

Download enquiry.html

Download updated complete project ZIP

**4. Test your form**

1. Open enquiry.html in Chrome.
2. Click the Student Name label.
3. Check that the cursor enters the name field.
4. Repeat for Email, Phone and Age.
5. Enter sample details and click Submit Enquiry.

Add the following code inside your enquiry.html file, within the <form> tag.

**enquiry.html**

```
<!DOCTYPE html>
<html>
<head>
  <title>Enquiry Form</title>
</head>
<body>

  <h2>Tuition Class Enquiry Form</h2>
```

```
<form>

  <!-- Subject Selection -->
  <label>Select Subject:</label>
  <select name="subject">
    <option value="">Choose a subject</option>
    <option value="HTML">HTML</option>
    <option value="CSS">CSS</option>
    <option value="JavaScript">JavaScript</option>
    <option value="C">C Programming</option>
    <option value="Java">Java</option>
  </select>

  <br><br>

  <!-- Study Mode -->
  <label>Study Mode:</label>

  <input type="radio" name="mode" value="Online">
  Online

  <input type="radio" name="mode" value="Offline">
  Offline

  <br><br>

  <!-- Message -->
```

```
    <label>Your Message:</label>
    <br>

    <textarea name="message" rows="4" cols="40"></textarea>

    <br><br>

    <input type="submit" value="Submit">

  </form>

</body>
</html>
```

**2.Extend 'enquiry.html' with a select named 'subject' whose options are the five subjects from your 'index.html', two radio buttons named 'mode' (Online and Offline), and a textarea named 'message' that is 4 rows tall and 40 columns wide. Hint: Radio buttons act as one group only when they share the same name value. Constraint: The select must start with an empty-value option reading 'Choose a subject'.**

**enquiry.html**

```
<!DOCTYPE html>
<html>
<head>
  <title>Enquiry Form</title>
</head>
<body>

  <h2>Tuition Class Enquiry Form</h2>
```

```
<form>

  <!-- Subject Selection -->
  <label>Select Subject:</label>
  <select name="subject">
    <option value="">Choose a subject</option>
    <option value="HTML">HTML</option>
    <option value="CSS">CSS</option>
    <option value="JavaScript">JavaScript</option>
    <option value="C">C Programming</option>
    <option value="Java">Java</option>
  </select>

  <br><br>

  <!-- Study Mode -->
  <label>Study Mode:</label>

  <input type="radio" name="mode" value="Online">
  Online

  <input type="radio" name="mode" value="Offline">
  Offline

  <br><br>

  <!-- Message -->
```

```
    <label>Your Message:</label>
    <br>

    <textarea name="message" rows="4" cols="40"></textarea>

    <br><br>

    <input type="submit" value="Submit">

  </form>

</body>
</html>
```

**3.Add validation attributes to 'enquiry.html' so the browser blocks submission unless the name has at least 3 characters, the email is valid, the phone is exactly 10 digits, the age is between 5 and 18, and a subject is chosen. Test with an empty form, an age of 25 and a phone of 98765. Hint: `pattern="[0-9]{10}"` accepts exactly ten digits; add a title attribute to show your own error hint. Constraint: Use HTML attributes only; write no JavaScript**

**1. Updated enquiry.html**

```
<!DOCTYPE html>
<html>
<head>
  <title>Enquiry Form</title>
</head>
<body>
```

```
<h2>Tuition Class Enquiry Form</h2>

<form>

  <!-- Name -->
  <label>Name:</label>
  <input type="text" name="name"
      minlength="3" required
      title="Name must contain at least 3 characters">

  <br><br>

  <!-- Email -->
  <label>Email:</label>
  <input type="email" name="email" required>

  <br><br>

  <!-- Phone -->
  <label>Phone:</label>
  <input type="tel" name="phone"
      pattern="[0-9]{10}" required
      title="Enter exactly 10 digits">

  <br><br>

  <!-- Age -->
```

```
<label>Age:</label>
<input type="number" name="age"
     min="5" max="18" required
     title="Age must be between 5 and 18">

<br><br>

<!-- Subject -->
<label>Subject:</label>
<select name="subject" required>
   <option value="">Choose a subject</option>
   <option value="HTML">HTML</option>
   <option value="CSS">CSS</option>
   <option value="JavaScript">JavaScript</option>
   <option value="C">C Programming</option>
   <option value="Java">Java</option>
</select>

<br><br>

<!-- Mode -->
<label>Study Mode:</label>
<input type="radio" name="mode" value="Online"> Online
<input type="radio" name="mode" value="Offline"> Offline

<br><br>

<!-- Message -->
```

```
    <label>Message:</label>
    <br>
    <textarea name="message" rows="4" cols="40"></textarea>

    <br><br>

    <input type="submit" value="Submit">

  </form>

</body>
</html>
```

**2. Explanation of validation attributes**

| Attribute | Purpose |
|---|---|
| required | Field cannot be empty |
| minlength="3" | Minimum 3 characters |
| type="email" | Checks valid email format |
| pattern="[0-9]{10}" | Exactly 10 digits |
| min="5" | Minimum age 5 |
| max="18" | Maximum age 18 |
| title | Displays your custom error hint |

**3. Test your form**

Test these three conditions in Chrome:

Test 1: Empty form

Invalid

- Leave every required field empty.
- Click Submit.

- Browser blocks submission.

Test 2: Age = 25

Invalid

- Enter age 25.
- Fill other required fields correctly.
- Click Submit.
- Browser shows an age validation error.

Test 3: Phone = 98765

Invalid

- Enter phone 98765.
- Fill other required fields correctly.
- Click Submit.
- Browser shows the phone validation error.

**4. Final result**

HTML validation completed

Your form now checks:

- Name: Minimum 3 characters.
- Email: Valid email format.
- Phone: Exactly 10 digits.
- Age: Between 5 and 18.
- Subject: Must be selected.

**4.Finish 'enquiry.html' by adding a submit button and a reset button, then fill the form with a fictional student and a made-up 10-digit phone number, submit it, and save a screenshot named 'enquiry_submitted.png' showing the address bar. Commit and push to 'tuition-class-site'. Hint: With method get the values appear after a ? in the address bar, but only fields that have a name attribute are sent. Constraint: Do not use a real person's name or phone number.**

**1. Update enquiry.html**

Inside your existing <form> tag, use method="get":

```
<form method="get">

  <!-- Name -->
  <label>Name:</label>
  <input type="text" name="name" minlength="3" required>

  <br><br>

  <!-- Email -->
  <label>Email:</label>
  <input type="email" name="email" required>

  <br><br>

  <!-- Phone -->
  <label>Phone:</label>
  <input type="tel" name="phone"
      pattern="[0-9]{10}" required
      title="Enter exactly 10 digits">
```

```
<br><br>

<!-- Age -->
<label>Age:</label>
<input type="number" name="age"
     min="5" max="18" required>

<br><br>

<!-- Subject -->
<label>Subject:</label>
<select name="subject" required>
   <option value="">Choose a subject</option>
   <option value="HTML">HTML</option>
   <option value="CSS">CSS</option>
   <option value="JavaScript">JavaScript</option>
   <option value="C">C Programming</option>
   <option value="Java">Java</option>
</select>

<br><br>

<!-- Mode -->
<label>Study Mode:</label>
<input type="radio" name="mode" value="Online"> Online
<input type="radio" name="mode" value="Offline"> Offline
```

```
  <br><br>

  <!-- Message -->
  <label>Message:</label>
  <br>
  <textarea name="message" rows="4" cols="40"></textarea>

  <br><br>

  <!-- Buttons -->
  <input type="submit" value="Submit">
  <input type="reset" value="Reset">

</form>
```

**2. Fill the form with fictional details**

Use these made-up details for testing.

Fictional student

| Field | Test value |
|---|---|
| Name | Rahul Sharma |
| Email | rahul@example.com |
| Phone | 9876543210 |
| Age | 16 |
| Subject | HTML |
| Study Mode | Online |
| Message | I want to join HTML classes. |

**3. Submit the form**

1. Open enquiry.html in Chrome.

2. Enter the fictional student details.
3. Select HTML as the subject.
4. Select Online.
5. Click Submit.
6. Check the browser address bar.

Your URL should look similar to:

file:///.../enquiry.html?name=Rahul+Sharma&email=rahul%40example.com&phone=9876543210&age=16&subject=HTML&mode=Online&message=...

The exact URL depends on your file location.

**4. Take screenshot**

Important

Your screenshot must show the browser address bar.

1. Keep the submitted form open.
2. Make sure the URL with submitted values is visible.
3. Press Win + Shift + S.
4. Capture the browser window, including the address bar.
5. Save the screenshot as:

enquiry_submitted.png

Save it inside your project folder.

**5. Push everything to GitHub**

Open your project folder in VS Code and open the terminal.

Run these commands:

git add enquiry.html enquiry_submitted.png

git commit -m "Complete enquiry form submission"

git push origin main

Your repository name should be:

tuition-class-site

If your branch is not named main, use your actual branch name.
