Session 6

1. Add three pass cards in index.html

Add this new <article> inside your existing <main> section, after the Contact article.

```
<article>
  <h2>Festival Passes</h2>

  <section class="pass">
    <h3>Day Pass</h3>
    <p>Price: ₹499</p>
    <p>Perk: Entry for one day.</p>
  </section>

  <section class="pass">
    <h3>Full Pass</h3>
    <p>Price: ₹999</p>
    <p>Perk: Entry for all three days.</p>
  </section>

  <section class="pass">
    <h3>VIP Pass</h3>
    <p>Price: ₹1999</p>
    <p>Perk: VIP seating and backstage access.</p>
  </section>
```

</article>

Each pass contains:

- An h3 heading.
- A price in Indian Rupees.
- One perk line.
- The class name pass.

2. Style the cards using CSS

Open style.css and add:

```
/* Pass card styling */
.pass {
  display: inline-block;
  width: 220px;
  box-sizing: border-box;
  padding: 16px;
  border: 2px solid black;
  margin: 12px;
  vertical-align: top;
  background-color: white;
}
```

Important CSS concepts:

- display: inline-block; puts cards side by side.
- width: 220px; sets the card width.
- box-sizing: border-box; includes padding and border within 220px.
- margin: 12px; creates space around each card.

Task 2 complete

3. Add a fixed Register button

First, add this CSS to style.css:

```
/* Make the page scrollable */
main {
  min-height: 1500px;
}

/* Fixed Register button */
.register-btn {
  position: fixed;
  bottom: 20px;
  right: 20px;
  background-color: orange;
  color: black;
  padding: 14px 24px;
  text-decoration: none;
  border-radius: 8px;
  font-weight: bold;
  border: 2px solid black;
}
```

Now add this link in index.html, just before the closing </body> tag:

```
<a href="#contact" class="register-btn">Register</a>
```

Designing Great UIs for Progressive Web Apps | by Owen Campbell-Moore | Medium

medium.com

How it works:

- position: fixed keeps the button in the same browser-window position.
- bottom: 20px keeps it 20 pixels from the bottom.
- right: 20px keeps it 20 pixels from the right.

Scroll your webpage. The Register button should stay in the same position.

4. Add Popular badge to Full Pass

Update your Full Pass HTML card like this:

```
<section class="pass">
  <span class="popular-badge">Popular</span>

  <h3>Full Pass</h3>
  <p>Price: ₹999</p>
  <p>Perk: Entry for all three days.</p>
</section>
```

Now add these CSS rules to style.css:

```
/* Full Pass card positioning */
.pass {
  position: relative;
}

/* Popular badge */
.popular-badge {
  position: absolute;
  top: 8px;
  right: 8px;
  background-color: red;
  color: white;
  padding: 5px 8px;
  font-size: 12px;
  border-radius: 5px;
}
```

180 CSS Cards

freefrontend.com

Understand positioning:

Property	Meaning
position: relative	Makes the card the positioning reference.
position: absolute	Positions the badge inside the card.
top: 8px	8px from the top.
right: 8px	8px from the right.

The badge will now appear in the top-right corner of the Full Pass card.

5. Final GitHub commit and push

Open VS Code terminal inside your college-fest-page folder.

Run these commands:

git add index.html style.css

git commit -m "Add pass cards and CSS positioning"

git push origin main

6. Final assignment checklist

Assignment progress

0/10

Added Day Pass, Full Pass and VIP Pass cards

Added price in ₹ and one perk line to each card

Styled cards with 220px width, 16px padding, 2px border and 12px margin

Used inline-block to display cards in one row

Used box-sizing: border-box

Added fixed Register button at bottom-right

Made main 1500px tall for scrolling test

Added Popular badge using span

Used relative positioning on cards and absolute positioning on badge

Committed and pushed changes to GitHub

Final result: Your VIBRANCE 2026 website will have three pass cards in one row, a floating Register button and a Popular badge on the Full Pass card.

Remember to check the page in Chrome before pushing it to GitHub!
