Session 7

1. Arrange three pass cards using Flexbox

In index.html, wrap your three existing pass cards inside an element with class passes.

Replace your existing pass cards section with this:

```
<article>
  <h2>Festival Passes</h2>

  <section class="passes">

    <section class="pass">
      <h3>Day Pass</h3>
      <p>Price: ₹499</p>
      <p>Perk: Entry for one day.</p>
    </section>

    <section class="pass">
      <span class="popular-badge">Popular</span>
      <h3>Full Pass</h3>
      <p>Price: ₹999</p>
      <p>Perk: Entry for all three days.</p>
    </section>

    <section class="pass">
      <h3>VIP Pass</h3>
      <p>Price: ₹1999</p>
```

```
        <p>Perk: VIP seating and backstage access.</p>
      </section>

  </section>
</article>
```

Now add this CSS to style.css:

```
/* Passes Flexbox layout */
.passes {
  display: flex;
  flex-direction: row;
  justify-content: space-between;
  gap: 16px;
}

/* Individual pass cards */
.pass {
  position: relative;
  width: 220px;
  box-sizing: border-box;
  padding: 16px;
  border: 2px solid black;
  margin: 0;
  background-color: white;
}
```

Important: Remove display: inline-block from your old .pass CSS rule.

2. Create Day 1 Schedule using Flexbox

Add this article inside your <main> section in index.html.

```
<article>
  <h2>Day 1 Schedule</h2>

  <section class="schedule">

    <section class="slot first-slot">
      <h3>10:00</h3>
      <p>Inauguration Ceremony and Welcome Speech</p>
    </section>

    <section class="slot">
      <h3>11:00</h3>
      <p>Singing</p>
    </section>

    <section class="slot">
      <h3>01:00</h3>
      <p>Dance Competition</p>
    </section>

    <section class="slot">
      <h3>03:00</h3>
      <p>Prize Distribution and Closing</p>
    </section>

  </section>
</article>
```

Add the CSS:

```
/* Schedule Flexbox */
.schedule {
  display: flex;
  flex-direction: row;
  align-items: center;
  gap: 10px;
}

/* Schedule boxes */
.slot {
  flex: 1;
  background-color: #FFF2CC;
  border: 2px solid #222222;
  padding: 15px;
  text-align: center;
}

/* First slot takes twice the space */
.first-slot {
  flex: 2;
}
```

Understanding:

- display: flex creates a Flexbox layout.
- align-items: center vertically aligns the slot items.
- flex: 2 gives the first slot twice the available space of each flex: 1 slot.

3. Create Event Gallery using CSS Grid

Add this article inside your <main> section.

```
<article>
  <h2>Event Gallery</h2>

  <section class="gallery">

    <section class="tile tile1">1</section>
    <section class="tile tile2">2</section>
    <section class="tile tile3">3</section>
    <section class="tile tile4">4</section>
    <section class="tile tile5">5</section>
    <section class="tile tile6">6</section>
    <section class="tile tile7">7</section>
    <section class="tile tile8">8</section>

  </section>
</article>
```

Add this CSS:

```
/* Event Gallery Grid */
.gallery {
  display: grid;
  grid-template-columns: repeat(4, 1fr);
  grid-template-rows: repeat(2, 100px);
  gap: 10px;
}
```

```
/* Gallery tiles */
.tile {
  display: flex;
  justify-content: center;
  align-items: center;
  font-size: 25px;
  font-weight: bold;
  border: 2px solid #222222;
}

/* Use only the five existing fest palette colours */
.tile1 {
  background-color: #F4F4F4;
}

.tile2 {
  background-color: #222222;
  color: white;
}

.tile3 {
  background-color: rgb(30, 60, 120);
  color: white;
}

.tile4 {
  background-color: orange;
}
```

```
.tile5 {
  background-color: white;
}

.tile6 {
  background-color: #F4F4F4;
}

.tile7 {
  background-color: orange;
}

.tile8 {
  background-color: rgb(30, 60, 120);
  color: white;
}
```

Expected result: Eight numbered tiles arranged in four columns and two rows.

4. Make the header a Flexbox layout

Now update the beginning of your index.html.

Move the navigation links inside the header, beside the festival name.

```
<header>
  <h1>VIBRANCE 2026 - College Fest</h1>

  <nav>
    <a href="index.html">Home</a>
    <a href="#events">Events</a>
```

```
      <a href="#contact">Contact</a>
    </nav>
</header>
```

Add IDs to the relevant articles:

```
<article id="events">
    <h2>Events</h2>
    <!-- Your existing Events content -->
</article>
```

Keep id="contact" on your Contact article.

Now add the following CSS to style.css:

```
/* Header Flexbox */
header {
    display: flex;
    justify-content: space-between;
    align-items: center;
    background-color: #222222;
    padding: 15px 25px;
}

/* Header heading */
header h1 {
    margin: 0;
    color: white;
    background-color: transparent;
}

/* Navigation Flexbox */
```

```
nav {
  display: flex;
  gap: 16px;
  align-items: center;
}

nav a {
  color: white;
  text-decoration: none;
  font-weight: bold;
}

nav a:hover {
  color: orange;
}
```

Understanding the header:

CSS property	Purpose
display: flex	Places heading and navigation in one row.
justify-content: space-between	Heading left, navigation right.
align-items: center	Vertically centres both.
gap: 16px	Adds space between navigation links.
margin: 0	Removes default h1 margin.

5. Test your website at full width

Open index.html in Chrome.

18 Great Flexbox Examples for 2021

Timeline Scroll Design by Alap on Dribbble

Flexboxを使った2カラム・3カラム・マルチレイアウトの基本と応用 | Webクリエイターボックス

Check these four things:

1. Pass cards: Three cards appear in one horizontal row.
2. Day 1 Schedule: Four schedule boxes appear in one row, with the first box twice as wide.
3. Event Gallery: Eight tiles appear in four columns and two rows.
4. Header: Fest name appears on the left and navigation links on the right.

6. Commit and push to GitHub

Open the VS Code terminal and run:

git add index.html style.css

git commit -m "Add flexbox and grid layouts"

git push origin main

Final checklist

Assignment progress

0/12

Wrapped pass cards in .passes

Used Flexbox row and space-between

Removed inline-block and float

Added four Day 1 schedule slots

Used flex: 2 and flex: 1

Created eight gallery tiles

Used four-column and two-row CSS Grid

Used only five fest palette colours

Moved navigation inside header

Aligned header and navigation using Flexbox

Tested the website at full width

Committed and pushed to GitHub

One important tip: If your cards or schedule overflow the screen, check the browser width and the available space. The assignment asks for a row layout, so test at full desktop width first.

I can also help you review the complete website and catch CSS mistakes before submission.
