**1.Add the viewport meta tag `<meta name="viewport" content="width=device-width, initial-scale=1">` to 'index.html' of 'college-fest-page', open the page in the DevTools device toolbar at 360px wide, and save a screenshot named 'before_responsive.png' of how it looks before any media queries. Hint: Press Ctrl+Shift+M in DevTools, choose Responsive and type the width. If you missed Session 7, first build a fest page with three pass cards in a flex row and an 8-tile grid.**

**Ans:-**

**Step 1: Add the viewport meta tag**

Open college-fest-page/index.html.

Inside the <head> section, add:

<meta name="viewport" content="width=device-width, initial-scale=1">

Example:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1">
  <title>College Fest</title>
</head>
<body>

  <!-- Your college fest content -->

</body>
</html>
```

**Step 2: Open mobile view**

1. Open index.html in Google Chrome.

2. Press F12 to open DevTools.
3. Press Ctrl + Shift + M.
4. Select Responsive.
5. Set width to 360px.
6. Observe how the page looks without media queries.

**Step 3: Save screenshot**

1. Keep the device toolbar at 360px.
2. Press Ctrl + Shift + P in DevTools.
3. Search for Capture screenshot.
4. Select Capture screenshot.
5. Save the image as:

before_responsive.png

**Your assignment checklist**

- Three pass cards in a flex row.
- Eight tiles in a grid.
- Viewport meta tag added.
- Chrome device toolbar set to 360px.
- Screenshot saved as before_responsive.png.
- No media queries added yet.

## 2. Add a media query for max-width: 768px in 'style.css' that stacks the pass cards in one column, stacks the header's title above its nav, and shows the gallery as 2 columns and 4 rows. Hint: A flex row stacks when you set flex-direction: column on its container. Constraint: Use max-width queries only, so the desktop styles stay as the base.

**Step 1: Open style.css**

Add this code at the bottom of your CSS file:

/* Responsive design for tablets and mobile */

```
@media (max-width: 768px) {

  /* Stack header title and navigation */
  header {
    flex-direction: column;
    text-align: center;
  }

  /* Stack pass cards in one column */
  .pass-container {
    flex-direction: column;
    align-items: center;
  }

  /* Gallery: 2 columns and 4 rows */
  .gallery {
    grid-template-columns: repeat(2, 1fr);
    grid-template-rows: repeat(4, auto);
  }

}
```

**Step 2: Understand the CSS**

| CSS property | Meaning |
|---|---|
| max-width: 768px | Applies to screens up to 768px |
| flex-direction: column | Displays items vertically |
| text-align: center | Centers text |
| repeat(2, 1fr) | Creates 2 equal columns |

repeat(4, auto)  Creates 4 rows

Important: .pass-container and .gallery must match the actual class names in your HTML.

**Step 3: Expected result**

Pass cards

Orcon Website for 2Degrees - Gladeye

gladeye.com

Gallery

Responsive Image Gallery with CSS Grid - DEV Community

dev.to

**Step 4: Test your responsive design**

1. Open your website in Chrome.
2. Press F12.
3. Press Ctrl + Shift + M.
4. Set width to 360px.
5. Check that the pass cards are vertical and gallery has 2 columns.

## 3. Add a second media query for max-width: 480px that reduces the h1 to 28px, sets the main padding to 12px and shows the gallery as 1 column and 8 rows. Constraint: Put only the rules that change at this width inside the query; do not repeat the 768px rules.

Add this second media query below your existing max-width: 768px media query in style.css:

```
/* Responsive design for small mobile screens */

@media (max-width: 480px) {

  /* Reduce heading size */
```

```
  h1 {
    font-size: 28px;
  }

  /* Reduce main section padding */
  main {
    padding: 12px;
  }

  /* Gallery: 1 column and 8 rows */
  .gallery {
    grid-template-columns: 1fr;
    grid-template-rows: repeat(8, auto);
  }

}
```

**4. Finish by testing the page at 360px, 768px and 1200px in the DevTools device toolbar, fixing anything that makes a horizontal scrollbar appear, then save 'after_responsive.png' at 360px and push everything to 'college-fest-page'. Hint: A horizontal scrollbar means some element is wider than the screen; hover elements in the Elements panel to find it, and `max-width: 100%` stops images overflowing.**

To finish the responsive-design task, test all three screen widths and make sure no horizontal scrollbar appears.

I can guide you through the steps, but I can't directly test or push your local college-fest-page project unless you upload the project files or connect the relevant repository.

1. Test at three screen widths

1. Open index.html in Chrome.
2. Press F12, then press Ctrl + Shift + M to open the Device Toolbar.
3. Select Responsive and test these widths:

| Width | What to check |
| --- | --- |
| 360px | One gallery column, smaller heading, no horizontal scrollbar |
| 768px | Two gallery columns, stacked header and pass cards |
| 1200px | Desktop layout remains unchanged |

2. Fix horizontal overflow

Add this CSS if images are overflowing:

```
img {
  max-width: 100%;
  height: auto;
}
```

If the page still scrolls horizontally, inspect the Elements panel and check for elements wider than the viewport. Look for fixed widths, large margins, or content that cannot wrap.

3. Save after_responsive.png

At 360px:

1. Open the DevTools command menu with Ctrl + Shift + P.
2. Type Capture screenshot.
3. Select Capture screenshot.
4. Save the image as after_responsive.png inside your project folder.

4. Push everything to college-fest-page

Open the terminal in your project folder and run:

git add .

git commit -m "Complete responsive design"

git push

If Git is not connected to your repository yet, you must configure the remote and branch first.

Final checklist:

- Tested at 360px, 768px and 1200px.
- No horizontal scrollbar at any width.
- Saved after_responsive.png at 360px.
- Saved all CSS and HTML changes.
- Pushed the changes to the college-fest-page repository.
