Session 9

1. Create index.html with Bootstrap CDN

Create a new folder named pg-finder-site, then create index.html.

Add this complete basic HTML structure:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">

  <meta name="viewport" content="width=device-width, initial-scale=1.0">

  <title>Apna PG Finder</title>

  <!-- Bootstrap CSS CDN -->
  <link href="https://cdn.jsdelivr.net/npm/bootstrap@5.3.8/dist/css/bootstrap.min.css" rel="stylesheet">

</head>
<body>

  <div class="container mt-4">

    <h1>Welcome to Apna PG Finder</h1>

    <p>
      Apna PG Finder helps students and working professionals
```

```
        find affordable paying guest accommodation in different
        cities with comfortable rooms, reasonable rent and
        convenient sharing facilities.
      </p>

    </div>

</body>
</html>
```

Task 1 complete.

Important:

- viewport makes your website responsive on mobile devices.
- Bootstrap CDN connects Bootstrap CSS without downloading files.
- container gives your content proper spacing.

2. Add filter and listings columns

Inside your existing .container, below the paragraph, add this code:

```
<div class="row mt-4">

  <!-- Filter Column -->
  <div class="col-12 col-md-3">

    <h3>Filters</h3>

    <label>City</label>
    <select class="form-select mb-3">
      <option>Ahmedabad</option>
      <option>Surat</option>
```

```
      <option>Vadodara</option>
      <option>Rajkot</option>
    </select>

    <label>Rent range</label>
    <select class="form-select mb-3">
      <option>₹4,000 - ₹8,000</option>
      <option>₹8,000 - ₹12,000</option>
    </select>

    <label>Gender</label>
    <select class="form-select mb-3">
      <option>Male</option>
      <option>Female</option>
      <option>Any</option>
    </select>

    <label>Sharing</label>
    <select class="form-select mb-3">
      <option>Single</option>
      <option>Double</option>
      <option>Triple</option>
    </select>

  </div>

  <!-- Listings Column -->
  <div class="col-12 col-md-9">
```

```
    <h3>Available PG Rooms</h3>

  </div>

</div>
```

How Bootstrap works here:

Class	Meaning
container	Main content area
row	Creates a horizontal row
col-12	Full width on small screens
col-md-3	3 grid columns from 768px
col-md-9	9 grid columns from 768px
mt-4	Adds top margin

Task 2 complete

Below 768px, filters and listings stack vertically. From 768px upwards, they sit side by side.

3. Add six PG listings using Bootstrap Grid

Inside the col-12 col-md-9 listings column, below the heading, add a nested row with six listing boxes.

```
<div class="row g-3 mt-2">

  <div class="col-12 col-sm-6 col-lg-4">
    <div class="listing">
      <h4>Sunshine PG</h4>
      <p>City: Ahmedabad</p>
      <p>Rent: ₹5,000</p>
```

```
    </div>
</div>

<div class="col-12 col-sm-6 col-lg-4">
    <div class="listing">
        <h4>Royal PG</h4>
        <p>City: Surat</p>
        <p>Rent: ₹7,000</p>
    </div>
</div>

<div class="col-12 col-sm-6 col-lg-4">
    <div class="listing">
        <h4>Green House PG</h4>
        <p>City: Vadodara</p>
        <p>Rent: ₹8,000</p>
    </div>
</div>

<div class="col-12 col-sm-6 col-lg-4">
    <div class="listing">
        <h4>Comfort PG</h4>
        <p>City: Ahmedabad</p>
        <p>Rent: ₹9,000</p>
    </div>
</div>

<div class="col-12 col-sm-6 col-lg-4">
```

```
      <div class="listing">
        <h4>Happy Stay PG</h4>
        <p>City: Rajkot</p>
        <p>Rent: ₹10,000</p>
      </div>
    </div>

    <div class="col-12 col-sm-6 col-lg-4">
      <div class="listing">
        <h4>Dream Home PG</h4>
        <p>City: Surat</p>
        <p>Rent: ₹12,000</p>
      </div>
    </div>

</div>
```

Now add this <style> section inside the <head> of your HTML file:

```
<style>
  .listing {
    border: 1px solid black;
    padding: 8px;
  }
</style>
```

How the responsive grid works:

Screen width	Bootstrap class	Listings per row
500px	col-12	1

800px	col-sm-6	2
1200px	col-lg-4	3

Remember:

- col-12 = 100% width.
- col-sm-6 = 50% width.
- col-lg-4 = 33.33% width.

4. Add a full-width top band

Add this CSS inside your existing <style> tag:

```
.top-band {
  background-color: #123456;
  color: white;
  padding: 20px 0;
}

.top-band h1 {
  margin: 0;
}
```

Now add this HTML immediately after the opening <body> tag and before your .container:

```
<div class="container-fluid top-band">

  <div class="container">
    <h1>Apna PG Finder</h1>
    <p>Find your perfect PG accommodation!</p>
  </div>
```

Your page now has a full-width coloured header band, while the main content remains inside a Bootstrap container.

5. Test your website at three screen sizes

Open index.html in Google Chrome.

1. Press F12.
2. Click the Device Toolbar icon (Ctrl + Shift + M).
3. Enter the following screen widths one by one.

Adding CSS & responsiveness · GitBook

resources.nwplus.io

Expected responsive results

500

pixels

1 per row

800

pixels

2 per row

1200

pixels

3 per row

6. Create a public GitHub repository

1. Visit GitHub – New Repository.
2. Repository name: pg-finder-site.
3. Select Public.
4. Click Create repository.

Open the project folder in VS Code and run:

git init

git add index.html

git commit -m "Create responsive PG finder website"

git branch -M main

git remote add origin https://github.com/YOUR-USERNAME/pg-finder-site.git

git push -u origin main

Replace YOUR-USERNAME with your GitHub username.

7. Final assignment checklist

Your assignment progress

0/12

Created index.html with viewport meta tag

Linked Bootstrap CSS using CDN

Created container with heading and 20+ word paragraph

Added filter and listings columns

Used col-md-3 and col-md-9

Added six PG listing boxes

Added city and rent between ₹4,000 and ₹12,000

Styled .listing with border and padding

Added full-width container-fluid top band

Tested at 500px, 800px and 1200px

Created public pg-finder-site repository

Pushed project to GitHub

Important: Your six listings should automatically change from 1 to 2 to 3 columns as the screen gets wider. You do not need to write your own CSS widths.
