10. Movie Ticket Booking

```
#include <stdio.h>

int calculatePrice(int age, char student)
{
   int price = 200;

   if (age < 12)
      price = 100;
   else if (student == 'y' || student == 'Y')
      price = 160;
   else if (age >= 60)
      price = 140;

   return price;
}

int main()
{
   int tickets, age, i;
   char student;
   int price, total = 0;

   printf("Enter number of tickets: ");
   scanf("%d", &tickets);

   for (i = 1; i <= tickets; i++)
   {
```

```
        printf("\nPerson %d\n", i);

        printf("Enter age: ");
        scanf("%d", &age);

        printf("Is student? (y/n): ");
        scanf(" %c", &student);

        price = calculatePrice(age, student);

        printf("Ticket Price = Rs.%d\n", price);

        total = total + price;
    }

    printf("\nTotal Amount = Rs.%d\n", total);

    return 0;
}
```
